**Workpiece charging significantly reduced**
The CO₂ Injector lowers the resistivity of purified water by dissolving carbon dioxide gas into the dicing cutting water. Once the user-set resistivity is reached, the CO₂ Injector maintains this level with a high degree of accuracy. By lowering the degree of static charge the workpiece acquires during cutting, the CO₂ Injector helps prevent particle adhesion and device damage caused by static electricity.

**Stable control of resistivity**
The CO₂ Injector was designed especially for dicing saws, in which, owing to processing requirements, the flow rate of cutting water is extremely variable. Thanks to the feedback control using the resistivity sensor and the multi-stage mixing system, which adjusts carbon dioxide concentration in two stages, the resistivity can be adjusted very accurately. When cutting water is turned on or off, the variation in resistivity generally becomes particularly larger. However, with the CO₂ injector, stability can be maintained, so that the constant discharge of cutting water is no longer necessary.

**Easy control via a direct link to dicing saw**
The CO₂ Injector is easily controlled through the dicing saw interface, allowing for real-time monitoring of cutting water flow and resistivity during cutting. Settings for alarm activation or process termination can be configured to protect yield when user-specified tolerances are exceeded.

**Logging of resistivity measurements**
The CO₂ Injector may be set to log resistivity measurements automatically when dicing saw functions are initiated, when the dicing of each wafer is complete, and when an alarm is activated. This logging function can be a valuable contributor to process quality design and management.

**Compact size and dicing saw build-in**
The CO₂ Injector fits neatly within the case of the DFD6240, DFD6340/6341, DFD6361/6362, and DFD6450.
**Compatibility with DFD600 Series**

A specification that supports connectivity with the DFD600 series is also available. (Limited to some models)

* The flow rate is constant within the range from 3 to 15 L/min at the supply water temperature.

Note: This machine does not include a CO₂ gas cylinder and cylinder stand.

- **CO₂ gas supply**
- **DI water supply**
- **Power supply and signal exchange**
- **RS232C link**
- **CO₂-dosed DI water**

- **To the user**:
  - Use CO₂ gas free of oil and other contaminants (99.5 % pure or higher). Further, use of a gas filter (0.3μm or less) is recommended.
  - Keep spindle cooling water the same as room temperature (fluctuations within ±1 °C).
  - The machines should be used in an environment free from external vibration. Do not install machine near a ventilation opening, heat generation equipment or oil mist generating parts.
  - This machine uses water. In case of water leakage, please install the machine on the floor with sufficient waterproofing and drainage treatments.
  - This machine does not include a CO₂ gas canister or regulator.
  - All pressures specified above are gauge pressures.
  - As the above specification may change due to technical modifications. Please confirm when placing your order.
  - For further information, please contact your local sales representative.
